Projects

Social Network App

JavaScript, HTML, CSS

- An online social network implemented in JavaScript and with MockAPI as backend.
- The user can sign up, login and logout. Login sessions are stored.
- The user can change profile pictures, post photos from camera or upload.
- The user can create posts, edit posts, like posts, delete the posts. Also, the user can view all likes of a post.
- The user can edit profile information (email, name, username, password, email).

Movie App

ReactJS, TheMovieDB API

- The application allows viewing and searching for TV shows and movies..
- When opening the application, the "TV shows" tab is displayed with the first 10 shows.
- An interactive search is triggered when the user enters 3 or more characters in the search field, displaying search results from the TMDB.
- The search is dynamic and reacts to every change in the input field.
- By clicking on a movie or show, detailed information and a picture/trailer are displayed.
- There is a button to return to the previous state and the search state.

Prompt Geinus App

NextJs, Tailwind, MongoDB

- Add, edit and delete prompts.
- Copying and using prompts in your own projects.
- Advanced search for prompts by name, tags or text.
- Google Cloud authentication for secure account access.
- Modern design using Tailwind CSS.
- Optimized performance for fast loading.
- Connect to a MongoDB database for reliable data storage and retrieval.

Full Stack MERN Application - Memories

React, Redux, Node.js, Express & MongoDB

- The possibility of creating a trip by entering the place and location of the visit.
- Possibility to add a picture with the trip.
- Ability to view the journeys of other users.
- Ability to like the trips of other users.
- Ability to delete own trips.
- Ability to edit existing own trips.
- All trips are stored in a MongoDB database connected to the Express server.
- Redux is used to manage application state on the client side.

Skills

- Advanced knowledge of HTML and CSS, as well as JavaScript for creating dynamic web pages.
- Experience using various CSS libraries, including Material UI, Tailwind, and Bootstrap.
- Ability to develop complex applications using React and Next.js libraries.
- Knowledge of using REST APIs to create dynamic web pages.
- I know the basics of Node.js, Express and MongoDB database for back-end application development.
- Knowledge of using static code analysis tools like ESLint and Prettier to ensure code quality and maintainability.
- I am familiar with using Redux, which includes using actions, action builders, reducers, repositories, and connecting components to the Redux repository.
